

AXIS Camera Station Mobile App

Introduction

Note

The user interface may differ depending on your application version, but the functionality is the same.

Through AXIS Camera Station mobile app, you can connect to your AXIS Camera Station server and access live view and recordings on your mobile device from anywhere. You can also export recordings and receive real-time notifications.

For current requirements, limitations, and latest features, go to:

- [AXIS Camera Station mobile app for Android *release notes*](#)
- [AXIS Camera Station mobile app for iOS *release notes*](#)

To see all videos about AXIS Camera Station mobile app, go to this [playlist](#).

Get started

Download AXIS Camera Station mobile app

For Android

Click *Download* or scan the following QR code.

For iOS

Click *Download* or scan the following QR code.

Connect to AXIS Camera Station server

Through the AXIS Camera Station mobile app, you can connect to:

- A single server installed on the local network
- Multiple servers through *Axis Secure Remote Access*

Connect to Secure Remote Access systems

Set up local notifications on Android

Receive notifications from Secure Remote Access systems

To watch this video, go to the web version of this document.

Set up remote notifications on iOS

To watch this video, go to the web version of this document.

Set up remote notifications on Android

Access control

With access control, you can manage doors from the AXIS Camera Station Pro Windows client or from the mobile app. Only administrators have access to access control in the mobile app.

With a door configured in a split view, you can:

- Open the door for visitors.
- Activate a lockdown.
- Receive notifications when someone opens or closes a door.
- Receive alarms, for example, when a door is open for too long, or opened by force.

To perform a door action:

1. Go to views.
2. Open the split view with the door you want to perform an action on.
3. Select one of the actions.

Door actions in a split view	
Resume schedule	To return the door to the configured system rules, click Resume schedule .
Grant access	To manually grant access, click Grant access . This unlocks the door in the same way it would if someone presented their credentials, which normally means it automatically locks after a set time.
Unlock	To manually unlock the door, click Unlock . The door stays unlocked until you manually lock it again.
Lock	To manually lock the door, click Lock .
Lockdown	To prevent access to the door, click Lockdown .

The AXIS Camera Station Pro server saves all actions and makes them available in the data search log.

Note

You can also perform these actions from the **Doors** tab in the mobile app, on a single door or on an entire zone at once.

For more information, see *Door dashboard in split view in the AXIS Camera Station Pro user manual*.
