

# **AXIS Audio Manager Center**

## **AXIS Audio Manager Center – September, 2025**

- **Event log**  
A new 'Event log' page gives you full visibility into health events across your organization. Filter by time range, location, site, or event type, and export results to CSV for reporting or analysis. The log stores events for up to 6 months, helping you track trends and troubleshoot issues more effectively.
- **Improved health notifications**  
You can now configure custom health notifications for specific health scenarios and recipients. Choose between email or webhook channels.  
This update makes it easier to stay informed and integrate with your existing workflows.
  - **Email channel:** Sends summary emails of all events for a selected trigger type within a configurable delay window.
  - **Webhook channel:** Provides real-time notifications for immediate event handling.
- **Improved user management**  
An individual user's access rights can now be configured directly in the Users list for improved management.
- **Improved user interface**  
Various improvements have been made to the user interface for a better experience.

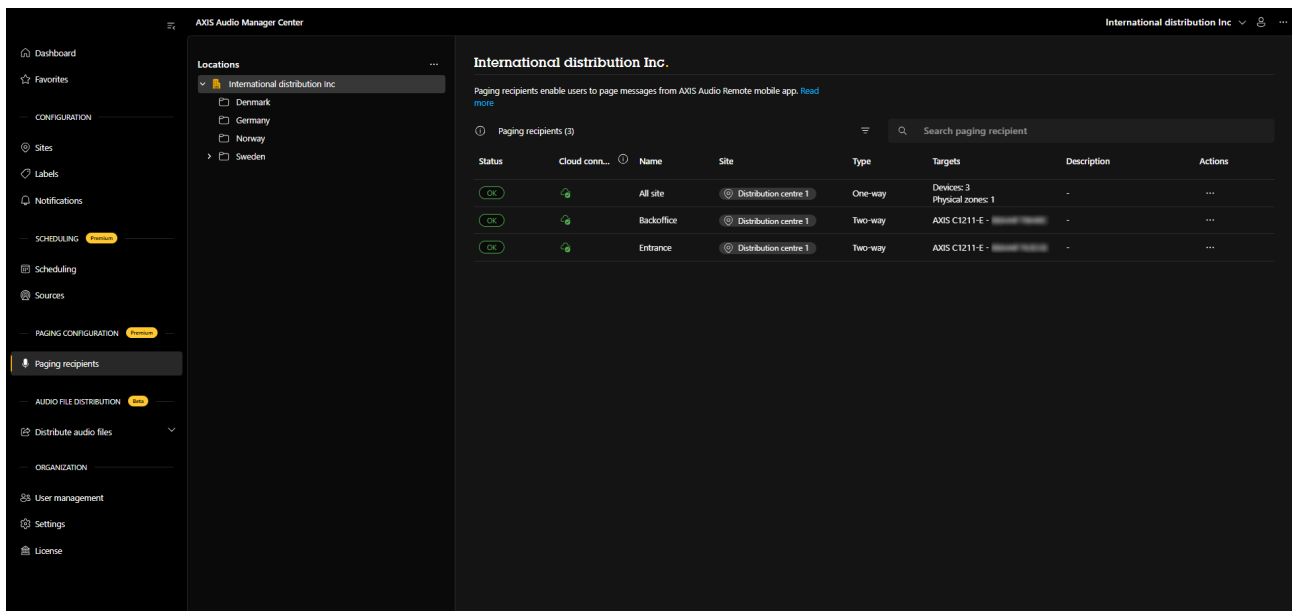

## AXIS Audio Manager Center – February, 2025

- **Paging from anywhere in the world**  
As a premium user, you now have the possibility to configure **one-way** and **two-way** remote paging. Together with our **AXIS Audio Manager mobile app** this enables two major use cases:
  - Call out to one or more speakers in your organization, either live or with pre-recorded messages.
  - Call a speaker in your organization for a full two-way communication.

This service does not rely on local Wi-Fi access to your site's audio devices. Instead, it utilizes a secure and encrypted connection through AXIS Audio Manager Center. Communicate via your speakers from anywhere in the world!

To watch this video, go to the web version of this document.

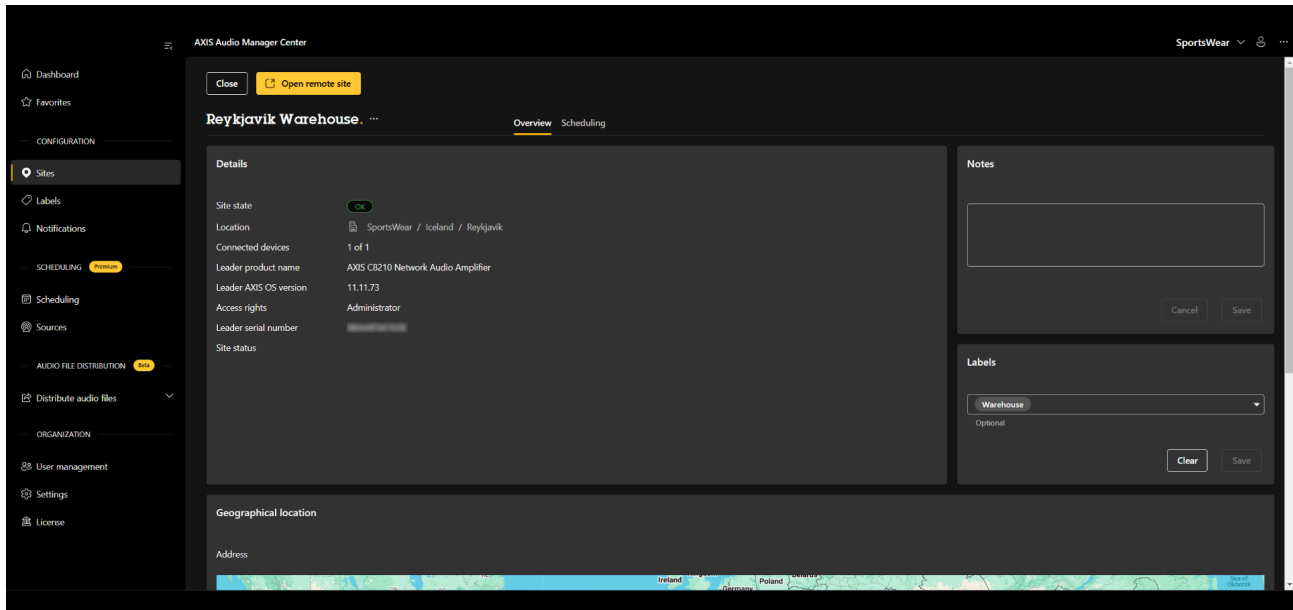

- **Redesigned dashboard**  
The dashboard has been updated to be more user friendly and provide a better status overview at a glance.

## AXIS Audio Manager Center – October, 2024

- Improved user interface

We have made a major visual update to the user interface. The user flows and functionality remain unchanged, but you will notice a new, more modern design. This update enhances clarity without affecting how you use the system. The application now also supports dark mode.

## AXIS Audio Manager Center – July, 2024

- **Increased flexibility in scheduling**

As a premium user you can now schedule announcement and advertisement events at specific times, in addition to relative scheduling (e.g. scheduling an event for "09:00" instead of "Opening hour +1").

- Up to eight interval events can be scheduled during a day when using specific times.

The screenshot displays the AXIS Audio Manager Center interface. The left sidebar contains navigation links: Dashboard, Favorites, CONFIGURATION, Sites, Labels, Notifications, SCHEDULING (Premium), Music sources, AUDIO FILE DISTRIBUTION, and ORGANIZATION. The main content area is titled 'Store announcements' and features tabs for Schedule, Content, and Sites. The 'Schedule' tab is selected, showing a 'Schedule status' section with a 'Disabled' toggle and an 'Enabled' checkbox. Below this is the 'Announcement schedule' section, which displays a calendar view for the week of Monday to Saturday. The calendar shows specific time slots for 'Store opening.wav' and 'Store closing.wav' events. For example, on Monday, there are events at 09:00 and 17:00. The 'Targeted sites' section on the right shows 'Helsinki' as the selected site. A 'Single event' modal is open on the right side, showing options for 'Single event type' (Specific time or Relative to opening hours), 'Days' (Monday, Tuesday, Wednesday, Thursday, Friday, Saturday, Sunday), 'Time' (12:00), and 'Audio file' (Store Lunch Ann...cement.wav). An 'Add' button is visible at the bottom right of the modal.
