My Systems: What's New

What's new

October 2024

This is what's new in the October 2024 release of My Systems

User management

- You will now assign roles and give granular access to users before you send the invitation to join your organization. Granular access is available for Operators and Viewers.

September 2024

This is what's new in the September 2024 release of My Systems:

User management

- Granular permissions can now be applied to the Operator and Viewer roles. The Operator and Viewer roles can be granted access to a specific folder.

Device management

- You can now upgrade multiple devices at the same time.

- You can choose which version of the latest version of AXIS OS to upgrade your device with.

- You can now delete an empty folder.

User experience

- My Systems menu items have been updated to make it easier to navigate.
