My Systems

User manual

About

This document lists updates to the core components of My Systems. For news about updates to your integrated applications and offerings, go to their respective documentation.

December 2026

This is what's new in the December 2026 release of My Systems:

User experience

- **Organization** — We've moved all the organizational apps to the side panel, so you can access them quickly.

AXIS Data Insights

- **Set input data source** — You can now set up the input data source directly in AXIS Data Insights instead of going to each device. This works for both the Occupancy estimation and Air quality monitoring dashboards..

AXIS Device Manager

- **Multi site support** — You can now create sub-sites under your site in the organizational tree structure to manage your devices in more detail.
- **Device notes** — Add notes to each device to keep track of extra details. You can enter up to 200 characters in the free text field.
- **Edit device accounts** — You can now change the password and role for device accounts directly from the list.

July 2026

This is what's new in the July 2026 release of My Systems:

User experience

- **New navigation** — We introduce a redesigned architecture that delivers faster, more responsive navigation, along with a new top-right app selector for easy access to applications.

License management

- **Refreshed Licenses menu** — New design for improved clarity and easier navigation.

AXIS Data Insights

- AXIS Data Insights is a managed service in My Systems — It aggregates data from AXIS Object Analytics and environmental sensors across your sites to deliver actionable operational insights.

AXIS Device Manager

- **Organization tree structure** — Organize all your resources in a familiar tree structure — just like folders on your computer. Place cameras, speakers, and views exactly where they belong
  - Stay flexible as your organization grows or change — restructure anytime.
  - The same structure also controls access management: assign roles per folder to give each user the right level of access.
- **Remote device interface** — Access the device interface directly in the device list.
  - Edit advanced settings through the cloud device interface.
  - Cloud-based when possible and remote connection directly to the device when needed.
- **Move devices** — move your devices around to different sites
- **Register device for cloud connection** — register serial and OAK so that a device can be connected to cloud services.

AXIS Camera Station Pro

- **Smart Search** — Refined camera selection and management in the filter list.

March 2026

This is what's new in the March 2026 release of My Systems:

License management

- **The Organization wallet** — The Organization wallet is a central hub in My Systems where you can see and manage all of your organization's licenses.
  It lets you:
  - Get a complete overview of all your licenses in the organization.
  - Redeem license keys for products in preparation of future system deployments.
  - Streamline the licensing and allocation process.

February 2026

This is what's new in the February 2026 release of My Systems:

User experience

- **Landing page** — You now start on a landing page when you first sign in to My Systems. On it you'll clearly see which organization you've signed into, and there are also links to the core functions and settings.

License management

- **Archive systems** — If a server breaks down, or you have connected a server to the wrong organization, you can archive the server in order to install a new server or add the server to the correct organization.- *read more*.

January 2026

This is what's new in the January 2026 release of My Systems:

AXIS Device Manager

- **Devices** — Device panel
  - When you select a device in the list, a panel will be shown on the right side with detailed device information.

License management

- **My software** — a new page that offers an overview of the license status, trials and subscriptions for your software.

This is what's new if you are a user of either AXIS Camera Station Pro 6.12 or Edge

AXIS Camera Station

- **Video operation** — Scrubbing now has more frequent frame updates giving you a more detailed preview of the video while you go through the timeline.

In addition to the mentioned features, the release includes performance improvements and fixes.

December 2025

This is what's new in the December 2025 release of My Systems, if you are a user of either AXIS Camera Station Pro 6.12 or Edge:

AXIS Device Manager

- **Devices** — Change device names
  - You can now change the names of devices in the device lists to be more descriptive.
  - The new names will be synced with all active web applications.

AXIS Camera Station

- **Video operation** — The microphone function in Video operation is now push-to-talk, like in the AXIS Camera Station Edge and Pro Windows clients.

November 2025

This is what's new in the November 2025 release of My Systems:

AXIS Device Manager

- **AXIS Device Manager Edge and Extend, AXIS Camera Station Edge and Pro 6.12** — SD-Card insights and notifications:
  - Show if an SD card is inserted in a device
  - Show if the SD card is from Axis or a third party manufacturer
  - If you have an Axis SD card, you can enable **Share diagnostics device** data and get predictive maintenance insights, recommending to replace the card within a certain time period.

AXIS Camera Station

If you are a user of either AXIS Camera Station Pro 6.12 or Edge, this is what's new in My Systems:

- **Video operation** — It's now possible to split views in Video Operation
  - Users can create and edit views
  - Administrators can share the views with users who have access to the site
  - User can edit views created in the web client or in the AXIS Camera Station Edge windows client.

If you are a user of AXIS Camera Station Pro 6.12, this is what's new:

- **Video operation**
  - You can aggregate views from multiple servers.
  - Views created in the web client won't be synced with the AXIS Camera Station Pro server.
- **Smart Search**
  - You can search within a specific time frame across multiple days.

In addition to the mentioned features, the release includes performance improvements and fixes.

October 2025

This is what's new in the October 2025 release of My Systems:

AXIS Device Manager

- **AXIS Device Manager Extend** — Users of AXIS Device Manager Extend can now manage local accounts on devices:
  - Create new accounts
  - Change passwords
  - Delete accounts

Note

Device accounts that are used by our applications and services can't be modified. Changes to those accounts could make devices inaccessible for solutions like AXIS Camera Station Edge or AXIS Device Manager Edge and Extend.

License management

- **Transfer licenses to another organization** — It's now possible for administrators to transfer licenses in the Product Wallet to other organizations. The transfer is made wallet to wallet, and you need to be an administrator in both organizations.

In addition to the mentioned features, the release includes performance improvements and fixes.

September 2025

This is what's new in the September 2025 release of My Systems:

AXIS Device Manager

- **AXIS Device Manager Edge** — With this new offering you can access selected functionality in My Systems. That includes an overview of device inventory with connectivity status. You can also schedule and perform software upgrades as well as monitor warranty, discontinuation, and end-of-support dates. To access all features of AXIS Device Manager Edge, download the client.
- **AXIS Device Manager Extend** — Users of AXIS Device Manager Extend can now also use the device management web client in My Systems.

AXIS Camera Station

If you are a user of AXIS Camera Station Pro 6.9, this is what's new in My Systems:

- **Upgrade AXIS Camera Station Pro servers** — You can now trigger a remote upgrade of your AXIS Camera Station Pro servers to the latest version.
- **AXIS Camera Station Pro Secure Remote Access** — Grant users access to servers using Secure Remote Access without enabling browser access.
- **Folder tree navigation** — You can now browse your servers with their cameras and views in a tree structure with breadcrumb navigation.

In addition to the mentioned features, the release includes performance improvements and fixes.

July 2025

This is what's new in the July 2025 release of My Systems:

AXIS Device Manager

- **Delete device** — You can now remove devices from your organization.
  - Note that you need to remove one device at a time.
- **Warranty information** — You can now see for how long the warranty is valid for all devices.

AXIS Camera Station

If you are a user of AXIS Camera Station Pro 6.9, this is what's new in My Systems:

- **Multisite smart search** — You now can search through recordings across multiple AXIS Camera Station Pro systems simultaneously.
  - Note that all of the selected systems that are searched has to be running AXIS Camera Station Pro 6.9.

In addition to the mentioned features, the release includes performance improvements and fixes.

June 2025

This is what's new in the June 2025 release of My Systems:

AXIS Device Manager

- The device information will now be shown in five columns. You can choose what information each column should contain. To see all of the information at the same time, you can export it to a CSV file.
- We'll now show the local device IP instead of dynamic host IP. This feature isn't yet available for AXIS S30 Recorder Series.
- My Systems will now hide devices that have been connected to My Systems more than once that have previously appeared as duplicate devices.
- It is now possible to turn off scheduled device software upgrades for non managed devices. This feature doesn't apply to devices managed by AXIS Camera Station Pro, or AXIS Camera Station Edge devices as they're always managed.

User experience

- The in-app what's new pop-up is paused until information about new features can be presented exclusively for users that are affected by them.

In addition to the mentioned features, the release includes performance improvements and fixes.

May 2025

This is what's new in the May 2025 release of My Systems:

AXIS Camera Station

If you are a user of AXIS Camera Station Pro 6.7 or later, or AXIS Camera Station Edge:

- **Video operation** — a selection of keyboard shortcuts for AXIS Camera Station Pro are now available in Video Operation in My Systems. A description of all of the shortcuts can be found here:*AXIS Camera Station web client user manual*.

In addition to the mentioned features, the release includes performance improvements and fixes.

April 2025

This is what's new in the April 2025 release of My Systems:

AXIS Camera Station

If you are a user of AXIS Camera Station Pro 6.7 or AXIS Camera Station Edge:

- **Cloud storage** – We now introduce a flexible licensing model that allows you to choose the resolution and retention time to fit your needs.

If you are a user of AXIS Camera Station Pro 6.7:

- **Smart search** – If a search takes longer than 1 minute and has processed less than 50% of the detections, a pop up will appear with a link to the user manual on how to adjust your search.

In addition to the mentioned features, the release includes performance improvements and fixes.

March 2025

This is what's new in the March 2025 release of My Systems:

AXIS Camera Station

If you are a user of AXIS Camera Station Pro 6.7, this is what's new in My Systems:

- **Cloud storage** — Now you'll have the ability to record AXIS Camera Station Pro cameras within the cloud. Check the requirements in the technical specifications for this feature. These prerequisites are needed when using cloud storage:
  - A system setup with AXIS Camera Station Pro.
  - The server must be registered to Connected services.
  - Cameras with AXIS OS version 11.11.73 or later.
- **Smart search - free text search** — Now you can use your own words to quickly search for your recorded content. Note that this feature requires AXIS Camera Station Pro 6.7.
- **Take snapshot** — Take a snapshot of the current view of a video source and save it. The snapshot is copied to the clipboard and downloaded to your computer. An easy way to be able to share information from your video operation in My Systems.

In addition to the mentioned features, the release includes performance improvements and fixes.

February 2025

This is what's new in the February 2025 release of My Systems:

User experience

- Integrated news of new changes. Users will be kept up to date with an overview of the new features added to the My Systems and its integrations when they sign in to My Systems. It can be accessed at any time in "What's new" in the My Systems top-bar.
- We have introduced a new design for the My Systems side menu to improve the user experience. This change is made in preparation for future interface improvements.

AXIS Camera Station

If you are a user of AXIS Camera Station Pro 6.6, this is what's new in My Systems:

- **Visual similarity search** — This is a feature that's added to Smart Search in My Systems, that enables operators to search for similar looking people on other cameras and times recorded on the same server.

November 2024

This is what's new in the November 2024 release of My Systems:

AXIS Device Manager

- Device software upgrade has been improved. Users of device management in My Systems can now set an update window for device software.
- You can now export an inventory list of all devices in your organization to a CSV-file. You can also select which specific devices to export to the file. The file contains information from every column in the device list.

User experience

- My Systems organization section has been updated to make it easier to navigate.

October 2024

This is what's new in the October 2024 release of My Systems

User management

- You will now assign roles and give granular access to users before you send the invitation to join your organization. Granular access is available for Operators and Viewers.

September 2024

This is what's new in the September 2024 release of My Systems:

User management

- Granular permissions can now be applied to the Operator and Viewer roles. The Operator and Viewer roles can be granted access to a specific folder.

AXIS Device Manager

- You can now upgrade multiple devices at the same time.
- You can choose which version of the latest version of AXIS OS to upgrade your device with.
- You can now delete an empty folder.

User experience

- My Systems menu items have been updated to make it easier to navigate.
